SYMPOSIUM
ON HIV/AIDS AND
INFECTIOUS DISEASE
BASIC AND TRANSLATIONAL
RESEARCH**

October 28th to 30th, 2024

Institut Pasteur, Paris, France

**Musketeers
and Samurai
together
against HIV
and hepatitis.**

About the France - Japan symposium

Vulnerability against pathogens and pandemic preparedness are high priority topics of increasing concerns and research. France and Japan are at the forefront of the research on infectious diseases and vaccine development.

The objective of this symposium is to convene experts from France and Japan across the broad range of scientific disciplines within basic research on HIV/AIDS and infectious diseases, in order to present new findings, advance scientific knowledge, and enhance global scientific and community collaborations.

KEY FIGURES

Experts speakers (25 from France, 25 from Japan)

50

40

Senior researchers

Young Investigators

10

150

Participants

Sessions conducted during the first two editions

14

37

One-to-one meetings in 2019 & 2022

Cross-sectional topics

The scope of the scientific sessions will cover research on pathogens like HIV, Hepatitis viruses, respiratory disease viruses (SARS-CoV-2, influenza), HTLV-1 and Flaviviruses, across multiple topical sessions, including virology, structural biology, immune response and vaccine and immunotherapies.

Ongoing studies

During this symposium results from ongoing collaborative studies between France and Japan will be highlighted, and a particular effort will be given to involve young French and Japanese investigators in the scientific presentations and exchanges.

One-to-one meetings

The symposium will also incorporate one-to-one meetings, providing attendees with personalised opportunities to engage and exchange ideas and methodologies. This will foster cross-country collaborations and will potentially lead to innovative solutions and collaborative research endeavours.

Previously conducted sessions

Some examples of the sessions conducted during the first two symposiums : Viral production mechanisms and pathogenesis, Innate immunity, Vaccination, Virus/host interaction, Adaptive response, Integration and latency, ...
